FORZA DI ATTRAZIONE
GRAVITAZIONALE

$$F = G \frac{m_1 m_2}{R^2} =$$

$$= 6,67 \times 10^{-11} \cdot \frac{2000 \cdot 2000}{4^2} \text{ N} =$$

$$= \frac{6,67}{4} \times 10^{-5} \text{ N} \approx \boxed{1,67 \times 10^{-5} \text{ N}}$$

$$\vec{F}_{12} = -\vec{F}_{21} \quad F_{12} = F_{21} = F$$

N 86 | Con quale forza il Sole attrae la Terra?

$$\text{distanza media Terra-Sole} \approx 150 \cdot 000 \cdot 000 \text{ km} = 1,50 \times 10^{11} \text{ m} = R$$

$$\text{Massa Terra } M_T = 5,972 \times 10^{24} \text{ kg}$$

$$\text{Massa Sole } M_S = 2,00 \times 10^{30} \text{ kg}$$

$$F = G \frac{M_T M_S}{R^2} = 6,67 \times 10^{-11} \frac{5,97 \times 10^{24} \times 2,00 \times 10^{30}}{(1,50 \times 10^{11})^2} \text{ N} =$$

$$= 35,395... \times 10^{21} \text{ N} \approx \boxed{3,54 \times 10^{22} \text{ N}}$$

PA 4. 25g N 93]

$$\Delta t = 2,5 \text{ min}$$

$$\Delta S = |\vec{PA}| = \sqrt{\overline{PO}^2 + \overline{OA}^2} = \sqrt{90^2 + 120^2} \text{ m} = 150 \text{ m}$$

VELOCITÀ RISPETTO ALLA TERRA? (ALLE SPONDE)

$$v = \frac{\Delta S}{\Delta t} = \frac{150 \text{ m}}{2,5 \times 60 \text{ s}} = \boxed{1 \frac{\text{m}}{\text{s}}}$$

Per similitudine abbiamo che

$$v_N : v = \overline{OP} : \overline{PA} \quad v_N = \frac{v \cdot \overline{OP}}{\overline{PA}} = \frac{1 \frac{\text{m}}{\text{s}} \cdot 90 \text{ m}}{150 \text{ m}} = 0,6 \frac{\text{m}}{\text{s}}$$

$$v_C : v = \overline{OA} : \overline{PA} \quad v_C = \frac{v \cdot \overline{OA}}{\overline{PA}} = \frac{1 \frac{\text{m}}{\text{s}} \cdot 120 \text{ m}}{150 \text{ m}} = 0,8 \frac{\text{m}}{\text{s}}$$
